RE: Heavy Metals Soil Remediation

Dear Mr. Bradley,

Soil Technologies, Inc. represents a company which has developed a new technology for the treatment of "Heavy Metals" contaminated soil. This new process is called Molecular Bonding System (MBS).

This technology was recently accepted into EPA's-SITE demonstration program, under contract #63-C5-000.

If you are currently managing a project, where heavy metal soil remediation is a proposed remedy, the "MBS" process may offer the best alternative. "MBS" is cost-effective, usually 30-50% less than other technologies in the market. Yet, offers a permanent solution so that treated material passes the TCLP test.

If you would like to receive more information about MBS technology and pertinent EPA testing/evaluation, please contact us at (314)231-1353 or (800)231-3990.

Best Regards,

Richard Russell  
President
